

Is the galaxy simply smooth and rounded,
with no sign of a disk?

Could this be a disk viewed edge-on?

Does the galaxy have a bulge at its centre?
If so, what shape?

Is there a sign of a bar feature through
the centre of the galaxy?

Is there anything odd?

Is there any sign of a spiral
arm pattern?

Is the odd feature a ring, or is the
galaxy disturbed or irregular?

How tightly wound do the spiral arms appear?

How prominent is the central bulge,
compared to the rest of the galaxy?

How many spiral arms are there?
